**Freedom to Locate Your Feeder**

This care and safety of wild birds is paramount to Brome Bird Care. In addition to wisely the Wild Bird Feeding Industry is very keen to reviews its Step Program for creating your very own Wild Bird Sanctuary.

There are six ways you can take to make the future heights for birds:

1. **Put out the welcome mats!**
   - What is the impact of the negative space in your yard and garden? Take the opportunity to improve your yard and garden to impress birds. Let birds know they are welcome by making your yard and garden a bird-friendly habitat. Start by turning your local wild bird shop.
   - To pick the best menu, stop by your local wild bird shop.

2. **Birds and chemicals don’t mix.**
   - Birds do not mix well with chemicals. Antibiotics and pesticides will be cleaned every three to five days, or every other day in warm weather. An alternative to use a 20% solution of white vinegar and warm water. Scrub birdbaths and feeders with a cloth or a brush. Replace water in bird baths at least once a week until the weather is turning hot and cats well fed will not solve the problem.
   - Keeping cats well fed will not solve the problem.

3. **Nesting boxes and water also benefits birds.**
   - To learn how, stop by your local wild bird shop.

4. **Birds and chemicals don’t mix.**
   - The care and safety of wild birds is paramount to Brome Bird Care.

5. **Keep feeding areas clean.**
   - To help reduce the possibility of disease transmittion in birds, clear birds and feeding areas at least once a day. Return bird water to a Pint bottle of water to limit the amount of feeders that birds can use to limit disease.
   - Typical energy values of feeders are a bonus for wild birds and provides only a part of their diet. Refill feeders regularly with food desired by birds in your area. To learn how, stop by your local wild bird shop.

6. **6 Birds and chemicals don’t mix.**
   - More problems, birds and feeders and feedings are toxic to birds, avoid using these areas when birds feed, bird baths are not. Always follow directions provided by the manufacturer. For additional information, visit your garden centers.

**What about bears and other larger animals?**

Wild bird food is attractive to a wide variety of predators. If you live in an area where wildlife is present, you may wish to consider moving feeders within 50 feet of the windows, so that birds will not be able to see the predators that might be present. If you live in an area where wildlife is present, you may wish to consider moving feeders within 50 feet of the windows, so that birds will not be able to see the predators that might be present.

**How long before birds come to a new feeder?**

Feeders should be within 50 feet of the window or within 50 feet of the window. See the window with the birds in it. They are constantly aware of the threat of predators and will take the time to check out the surroundings.

**Fastening Questions Answered**

**What about raccoons and other similar critters?**

What about raccoons and other similar critters? But the of the squirrels. The squirrel has similar energy values. See the window with the birds in it. They are constantly aware of the threat of predators and will take the time to check out the surroundings.

**What about raccoons and other similar critters?**

What about raccoons and other similar critters? The squirrel has similar energy values. See the window with the birds in it. They are constantly aware of the threat of predators and will take the time to check out the surroundings.

Patented Seed Tube Ventilation System

Damp and decaying seed decreases bird traffic and can spread disease. Most transparent bird feeder seed tubes trap solar energy just like a greenhouse. The warmer air in the Squirrel Buster Classic™ feeder rises and escapes through patented water-proof vents at the top of the feeder. The escaping, heated air is replaced by fresh air entering through the food ports as well as from the bottom of the feeder. Food remains fresh, attracting more birds.

How It Works
Openings in the wire mesh shroud align with the seed ports, providing birds access to the seed. When a squirrel climbs onto the feeder, its weight automatically forces the shroud down, closing access to the ports. Squirrels and some large birds are foiled but not harmed.

A Clean Feeder is a Healthy Feeder
A clean feeder is as important to birds as clean dishes are to humans. Grimy bird feeders can be a source of food contamination. Wild birds will naturally avoid spoiled food. A clean bird feeder will attract more wild birds.

Cleaning
Use a mild soap solution or a solution of warm water & white vinegar, which acts as a mild natural disinfectant. DO NOT PUT IN DISHWASHER. The high temperatures generated in a dishwasher could damage some components.

The Need for Clearance
Remember it is the squirrel’s weight that triggers the closing mechanism. If a squirrel can reach over from a nearby foothold and avoid placing its weight on the feeder, it will be able to access the seed. Force the squirrel to climb onto the feeder by leaving at least 18 in. / 46 cm. of clearance around the feeder. This will force the squirrel to climb onto the feeder triggering the closing mechanism.

Owner’s Guide
The spring mechanism is calibrated at the factory to hold 2.5 oz. / 70g. It will close fully at 6 oz. / 170 g. shutting out the smaller Red Squirrels, as well as the larger Gray Squirrels.

Squirrels
Douglas Squirrel 5 to 10 oz. / 140 to 280 g.
Red Squirrel 5 to 11 oz. / 140 to 310 g.
Gray Squirrel 12 to 26 oz. / 320 to 740 g.
Fox Squirrel 17 to 37 oz. / 480 to 1050 g.

Perches
Detachable Component System™
The Squirrel Buster Classic™ feeder is designed to be dismantled by hand into individual components without the use of tools. This allows for easy cleaning and assembly.

For both perching and clinging birds
The seed ports have perches for perching birds. However, the wire mesh provides a surface area for clinging birds such as Chickadees and Woodpeckers. Chickadees, Finches, and Sparrows enjoy both the clinging and perching positions.

Proven Technology
Our patented Squirrel Buster technology is widely respected and trusted. Over 1,000,000 very happy customers (and well fed birds) have confirmed it.

Negative grip tube
The negative grip tube prevents squirrels from grabbing the wire hanger with their hind legs, hanging down alongside the feeder and defeating the closing mechanism.

Seed level indicator
The indicator on the Center Post Cap marks the maximum seed level. Filling past this mark will impede the internal funnel from closing. Do not fill past this mark.

Seed Port Height
The seed ports are 1 1/6 in. / 28 mm. high. This allows for easy loading.
